TECHNICAL SKILLS

Languages: Python, Java, JavaScript, Ruby

Data & Analytics: Pandas, Data Analysis, Jupyter Notebook, Data Visualization

Frontend: React.js, HTML5, CSS3, Flutter, Angular

Backend: Node.js, Express.js, Ruby on Rails, Django, FastAPI, Rust

Databases: MongoDB, SQL, Google Cloud

Tools & Platforms: Git, GitHub, Sidekiq, Airbrake, Linux, Postman, Docker

Concepts: Data Analysis, REST APIs, Authentication, Database Indexing, Containerization, OOP

PERSONAL STATEMENT

Curious builder and problem solver with experience at Zolvit, passionate about creating impactful software and contributing to open-source projects. Driven by continuous learning and a strong interest in exploring diverse technologies while solving meaningful engineering challenges. Focused on building efficient, scalable solutions that create real-world impact.

EXPERIENCE

Zolvit (VakilSearch) | Backend Developer Intern

May 2025 – Sept 2025

What I did: Developed 10+ REST APIs, optimized database queries, and automated background jobs; contributed to service configurations, dashboards, and CRM data workflows.

- **Technology used:** Ruby on Rails, SQL, Sidekiq, JavaScript, Airbrake.
- **Impact delivered:** Improved backend performance by 25%, reduced DB latency by 30%, and automated 5K+ daily jobs.
- **Recognitions or Highlights:** Delivered production-ready features, resolved critical Airbrake issues, and improved system reliability.
- **Key Learnings:** Built expertise in backend optimization, debugging, and scalable system design in a production environment.

PROJECTS

AAROGAYA | [Github Repo Link](#)

2026

What I did: Built a full-stack health insurance claims platform with secure authentication and real-time claim tracking. Developed REST APIs, optimized database queries, and designed role-based dashboards for users.

- **Tech Stack and Frameworks used:** React.js, Node.js, Express.js, MongoDB, JWT, Google OAuth.
- **Problem Solved/Use Case:** Simplifies health insurance claim submission and tracking for patients and insurers. Improves transparency and efficiency in claim management workflows.
- **Challenges Tackled/Learning Outcome:** Handled authentication flows, role-based access control, and database performance tuning. Gained experience in building scalable full-stack applications and debugging real-time systems.

PulsePoint | [Github Repo Link](#)

2026

What I did: Analyzed employee engagement survey data using a structured “Question → Data → Insight” workflow to identify dissatisfaction drivers and trends.

- **Tech Stack and Frameworks used:** React.js, Python, Jupyter Notebook, Conda, Excel, Power BI
- **Problem Solved/Use Case:** Identified key dissatisfaction themes, department-wise trends, and time-based changes to support HR decision-making.
- **Challenges Tackled/Learning Outcome:** Applied data cleaning, exploration, and visualization techniques; gained experience in problem framing and deriving actionable insights from raw data.

OPEN SOURCE CONTRIBUTION

- **Developers Event Platform** — Implemented event **discount code** display from METADATA.csv
- **OSEM Project** — Added Code of Conduct access for users.
- **Rocket.Chat App** - Built slash-command app for mention capture and alerts(Challenge)

EDUCATION ENROLLMENT

Kalvium's UG program in CS (Software Product Engineering)

2025-27

The Apollo University | Murukambattu, Chittoor

ACHIEVEMENTS & EXTRACURRICULARS

- **Hackathons & Competitions:** Secured 3rd Prize in a college hackathon (50+ teams) for identifying vulnerabilities and resolving critical system issues(Develops).
- **Technical Contributions:** Solved 400+ LeetCode problems, strengthening DSA and problem solving skills; active open-source contributor and GSoC aspirant.
- **Campus Engagement / Leadership:** Presented a technical paper and maintained structured documentation of weekly activities in the Event Management Club, improving coordination and knowledge sharing.
- **Personal Interests:** Exploring cloud technologies (AWS EC2, S3, IAM) and upskilling through hands-on workshops.
